

LAB 02 · PROMPT RECORD

Student: Alimane · Numerical Methods · BES6-M

This is a truthful record of the requests used to develop the submitted files. The clean reference prompt at the end is labelled as a summary; it is not presented as an original chat message.

1. Please distinguish the instructions in the activity set from my personal requests. Using Data 01.xlsx, build a baseline version of the lab assignment.
2. Re-run and regenerate all deliverables (the HTML dashboard and results document) keeping the core analysis intact, but ensure all branding, headers, and metadata consistently reflect the name Alimane. Additionally, generate the corresponding results summary as a one-page PDF document.
3. Generate a clean prompt record file documenting the chat history used to build this lab submission.

Summary prompt

The core task was to separate the activity-set instructions from personal requests, build a baseline lab analysis from Data 01.xlsx, preserve the numerical-methods workflow, and regenerate the outputs with consistent Alimane branding and a final summary PDF.
